

PRINTER

Frequently Asked Questions

Q: What should I do when I get a error message showing “Out of paper” while printing, even if media is loaded?

A: 1, Check if the media has run out in the printer.

2, Check if the media guides are properly adjusted for the media.

3, Check if the media is loaded **under**, not above, its media sensor. Ensure the LED on the media sensor is positioned at the centre of media or aligned to gap/hole/notch so that the media sensor can detect where one label ends and the next one begins.

4, Check if the thermal transfer ribbon is loaded **above** the media sensor. If loaded under the media sensor, reload the ribbon above the media sensor .

Q: What do I do if get a error message showing “Out of ribbon” error while printing even if a thermal transfer ribbon is loaded?

A: 1, Check if the ribbon is loaded securely without any slippage on the hubs.

(a) For TE3112/TE3124/T6112DS printers, check if the knobs on both take-up (front)/pay-off (rear) ribbon hubs are secured by turning counter clockwise.

2, Check if the ribbon has run out or is reaching near the end. Sometimes the ribbon fails to feed out smoothly as it reaches near to the end because it causes too much tension. Replace it with a new ribbon.

3, Check if the ribbon is winding up in counter clockwise direction on its take-up (front) ribbon hub. Check the ribbon patch direction label on the printer or in the printer manual.

Q: What type of media can be printed on which TE printers, and what ribbon should I use?

A: Please use the following link [here](#) to download the latest version of the “IDENTIFICATION PRINTER PRODUCT RIBBON MATRIX” at the bottom of the web page.

Q: Are TE printers USB-3 compatible?

A: All TE printers use a USB-2 connection. A connection can be made from your USB-3 PC to TE Printers via a USB-2 cable. (Maximum USB-2 speeds and capacity)

Q: Where can I get the latest TE printer driver?

A: Please use this link [Drivers](#) to download TE Printer drivers and TE printer Firmware. download links are located near bottom of the website.

PRINTER

Frequently Asked Questions

Q: What causes my TE printers to print vertical streaks or white void spots?

A: The print head may be dirty or damaged.

1, Click [Link](#) to download a cleaning instruction, and follow the instruction to clean its print head and also its platen roller.

2, If no improvement is seen after cleaning, either the print head and/or the platen roller may be damaged. Please order a replacement print head and/or platen roller from a TE Connectivity distributor. For spare part numbers, consult TE Connectivity Identification Solutions technical support regional contact details: **411-121057** [Field support contact details](#).

Q: Why does my TE printer not respond to any print command ?

A: Check if the correct TE printer driver is installed on your PC.

1, Open <Control Panels → Device and Printers> in case of Windows 7 and later OS, or <Control Panels → Printers and Faxes> in case of any earlier OS version than Windows 7.

2, Check if a matching TE printer icon for your printer model appears under 'Printer and Faxes' section. If there is no matching printer model icon, or if it only appeared under 'Unspecified' section, no TE printer drivers are installed yet, even if PC recognizes its hardware connection.

3, Install the matching TE printer driver under a **local administrator** logon so that its icon appears under 'Printers and Faxes' section.

B, Check if the correct printer port is assigned on its printer driver.

1, Right-click on the matching TE printer icon to open its printer properties windows.

2, Click on the 'Ports' tab to find out which port has a check mark. If connected with a USB cable, a 'USB####' virtual printer port should be selected.

3, Disconnect the USB cable from PC while the printer is ON to see if the printer icon shows a colour change.

4, If there is no change, select to a different USB virtual printer port and repeat the previous cable connection test until selecting the correct USB virtual printer port with the icon colour change.

C, Double-click on the correct printer icon to check if its print queue windows show any print job remaining with error. If there are any, click on <Printer→ Cancel All Documents> menu to clear the print queue.

D, Check if correct printer model and printer port are selected from TE software.
